ABOUT ME

I'm a Computer Engineering graduate from Gebze Technical University, currently working **as a Software and DevOps Engineer at TUBITAK**. Over the past 3 years, I've focused on building reliable systems and automating infrastructure, with hands-on experience in **Kubernetes, Go, and OpenStack**. I'm passionate about cloud-native development and improving development workflows.

WORK EXPERIENCE & PROJECTS

Software and DevOps Engineer, TÜBİTAK

April 2022 – Present

- I have been working on the **Safir Cloud** project, a large-scale cloud infrastructure built on OpenStack. During this time, I automated the deployment of **Safir Cloud** and **Ceph** clusters using **Ansible**, and developed a web-based UI for managing these deployments.
- As part of our **cloud-native transformation**, I developed a **Blockchain-as-a-Service** platform using Golang, and extended OpenStack's **Kubernetes service (Magnum)** by adding new capabilities and improving its REST API using the **Gin framework in Go**.
- In the **Multi-Cloud Management** project, I took end-to-end ownership of the **DevOps processes**—including CI/CD pipeline design (Jenkins, Bitbucket), **GitOps-based delivery with ArgoCD**, infrastructure provisioning with **Terraform**, and Kubernetes environment automation.
- I actively contribute to the **OpenStack open-source ecosystem** and focus on enhancing **Kubernetes and cloud-native integrations** across multiple platforms.
- **Key Projects:**
 - Digital Turkish Lira (Blockchain as a Service)
 - TRNC e-Government Infrastructure
 - Cloud Solutions for Türksat, Türk Telekom, and Turkcell
 - Multi-Cloud Management Platform
- **Core Technologies:**
 - **Cloud & Orchestration:** Kubernetes, OpenStack (Magnum), Ceph, Multi-Cloud, Openshift
 - **Languages:** Golang, Python, Bash
 - **DevOps & Automation:** Ansible, Terraform, Jenkins, ArgoCD, GitOps
 - **Containers:** Docker, Containerd, LXC
 - **Monitoring:** OpenSearch, Fluentd
 - **Web & Networking:** Nginx, Apache

DevOps Engineer, Berqnet (Part-Time)

June 2021 – February 2022

- I worked on a **DevOps project**, where I automated the build and test processes of a FreeBSD-based system using **Jenkins pipelines**. Throughout this role, I gained hands-on experience with tools and technologies such as **Docker, Jenkins, Ansible, Vagrant, and Shell scripting**. Additionally, I developed a solid foundational understanding of networking concepts.

EDUCATION

M.Sc. in Software Engineering, Kocaeli University

September 2024 – Present

My Master's degree is currently in progress, during which I have completed several advanced courses relevant to software engineering and system design.

B.Sc. in Computer Engineering, Gebze Technical University

September 2017 – June 2022

- During my university studies, I successfully completed a wide range of courses, with a strong focus on programming in C, C++, and Java. Key courses I undertook include:
 - Data Structures and Algorithms
 - Object-Oriented Programming
 - System Programming (including concurrency, threads, and processes)
 - Operating Systems
- These courses provided me with a solid foundation in both theoretical concepts and practical software development skills.

TECHNICAL SKILLS

- **DevOps & Containerization:** Ansible, LXC, Containerd, Docker, Kubernetes, Vagrant, Jenkins, OpenShift
- **Cloud & Virtualization:** OpenStack, VMware, AWS
- **Web Frameworks:** FastAPI, Flask, Django (Python), Gin, Fiber, Echo (Golang)
- **Databases:** MySQL, MongoDB
- **Log Management:** ELK Stack, OpenSearch
- **Web Servers:** Apache, Nginx
- **Storage:** Ceph
- **Programming Languages:** Go, Python, C, C++, Java, Javascript

LANGUAGE SKILLS

- Turkish (Native)
- English
 - YÖKDİL Score: 72.5
 - GTU Proficiency Exam Score: 84
